Construct a regular hexagon if we know the radius of circumscribed circle. This is even easier. We just draw the circle $c(O, r)$ and pick a starting point on it, let it be point A . In regular hexagon, we know that the radius of circumscribed circle is equal to side of polygon, meaning $r = |AO|$

The easiest regular polygon to construct is a hexagon. To construct a hexagon, use a compass to draw a circle. Now, (keeping the compass at the same exact setting), place the compass point on the circumference
