"This book hopes to be a source of information for the teacher. It aims to present the essentials of all which modern psychology may offer to the school. Yet this is only one side of its task. Many signs indicate that a turn in the road of educational progress is near. Important changes seem unavoidable. A pedagogical unrest has set in. It is a time in which the fundamental principles and methods must be discussed with thoroughness and without prejudice. Hence it is not sufficient simply to report the psychological facts, but more important to examine carefully all the connections between psychology and education. The lack of clearness in this relation has been one of the most damaging sources of confusion in recent years. This book on psychology and education is, in a way, a continuation of my recent volumes, "On the Witness Stand" and "Psychotherapy," the one discussing the relation of psychology to law, the other to medicine. All three deal with the practical value of modern laboratory psychology for the daily life. They represent not the only, but the three most important aspects of applied psychology"--Preface. This book features contributions from various spheres of socio-humanitarian sciences presented at the scientific and practical conference on "Humans as an Object of Study by Modern Science," which took place in Nizhny Novgorod (Russian Federation) on November 23-24, 2017. The conference was organized by Kozma Minin Nizhny Novgorod State Pedagogical University and the non-profit organization "Institute of Scientific Communications." Presenting the results of multidisciplinary studies as well as new approaches, the target audience of the book includes postgraduates, lecturers at higher educational establishments, and researchers studying socio-humanitarian sciences. The complex study of humans by representatives of various socio-humanitarian sciences (philosophy, pedagogics, jurisprudence, social sciences, and economics) allows a comprehensive concept of the field to be developed. Selecting humans as an object of research opens wide possibilities for studying various issues related to their activities, while considering humans within multiple sciences means that the methods of induction and deduction can be combined to achieve precise results. This book includes the results of leading scientific studies on the following key issues: establishment of an information economy under the influence of scientific and technical progress: new challenges and opportunities; information and communication technologies as a new vector of development of the modern world economy; specifics and experience of using new information and communication technologies in developed and developing countries; problems of implementing new information and communication technologies in the modern economy; and priorities of using new information and communication technologies in the modern economy.

Corrosion due to water is one of the most significant and complex causes of damage to metallic products. Written from the viewpoint of physical chemistry, this authoritative and established text deals with the aqueous corrosion of metals. Available for the first time in English, Corrosion of Metal addressing engineers, metallurgists, physicists and chemists. This self-contained, valuable reference comprehensively organizes and makes readily accessible the accumulated wealth of fundamental and applied knowledge. The concentration is on the underlying essentials of corrosion and failure, and the material is consistently presented in relation to practical applications to corrosion protection. The first chapters introducing the physicochemical principles are ideal for students. The following chapters provide an overview of the state of research for those familiar with the fundamentals. An exhaustive bibliography and appendices conclude the volume.

"Kuznetsk Land first published in 1948 is the first major work published by the Soviet author Alexander Voloshin. Its action takes place in the Kuznetsk coal basin in the period between 1945 and 1947. The Kuznetsk basin was developed in Western Siberia during the first five year plan and is now an important

iron and steel area and cultural centre. The novel's hero Rogov, an ex-captain of the guards and an engineer in civilian life, returns from the front to start life anew at one of the mines there. The story unfolds against the background of life in a Soviet mining town. It is peopled with live flesh-and-blood human beings, Soviet men and women whose lives are ennobled by the part they play in combating all that is old and hidebound and promoting all that is new and progressive. These efforts of the majority are resisted by a few moral weaklings whose minds are burdened by survivals of the past, but who are nevertheless powerless to hold back the march of progress, to halt the miners' advance to higher levels of mining technique." --Goodreads

In *The Fall of Troy*, acclaimed novelist and historian Peter Ackroyd creates a fascinating narrative that follows an archaeologist's obsession with finding the ruins of Troy, depicting the blurred line between truth and deception. Obermann, an acclaimed German scholar, fervently believes that his discovery of the ancient ruins of Troy will prove that the heroes of the *Iliad*, a work he has cherished all his life, actually existed. But Sophia, Obermann's young Greek wife, has her suspicions about his motivations — suspicions that only increase when she finds a cache of artifacts that her husband has hidden, and when a more skeptical archaeologist dies from a mysterious fever. With exquisite detail, Ackroyd again demonstrates his ability to evoke time and place, creating a brilliantly told story of heroes and scoundrels, human aspirations and follies, and the temptation to shape the truth to fit a passionately held belief.

The report describes the state of implementation of the Bologna Process in 2012 from various perspectives and with data ranging from 2010 to 2011 as well as with earlier trends data for some statistical figures. --Ed.
