The author summarizes well the flowgraph and process block techniques used to implement path testing. In chapter 4, the author introduces the concept of a transaction flow as a representation of a system's processing. The flowgraphs developed in chapter 3 are used here to create a transaction flowgraph for functional testing.

• • •

Beizer's maxim for testing is, "When you see a graph, Page 11/16

cover it". Graph-based
methods underlie pretty well
all of the white-box methods
used to test software
components - but many
software engineers do not
appreciate that *exactly*
the same methods can be used
to derive test cases from
graphical functional
specifications.
