The copy of Principles of Mathematical Analysis by Walter Rudin that I own is interesting in one way; it states that it is the Indian Edition. Now I don't know much about publishing, but the biggest issue for me was whether or not the book was in English since I don't know any Indian languages. I mean, I suppose the paper making up the book ...

Principles of Mathematical Analysis by Walter Rudin

Mathematical Modeling essentially consists of translating real world problem into mathematical problem, solving the mathematical problems and interpreting these solutions in the language of real world. Nevertheless, a real world problem, in all its generality can seldom be translated into a mathematical problem, still it works. For example, a ball is the concept of a sphere.

Mathematical concepts ∫ context is keyMathematical concepts ∫ context is key. In the typical mathematics classroom, especially in the middle years of schooling, we tend to use one model to connect maths with the real world; we start by teaching the maths content and skills, we then get students to practice and do some maths, and then we next might apply some of those skills into a real world context by using learning activities such as word problems.

We begin this book with a dictionary deinition of the wordmodel: model(n): a miniature representation of something; a pattern of some- thing to be made; an example for imitation or emulation; a description or analogy used to help visualize something (e.g., an atom) that cannot be dir- ectly observed; a system of postulates, data and inferences presented as a mathematical description of an entity or state of affairs.

What is Mathematical Modeling?

1st year mathematics is heavily focused on grounding the student in mathematical analysis. Sequences, series, limits, sums, continuity and differentiability are the bread & butter concepts every maths student needs to know inside out. They call this task, 'the leap from school maths into university maths'.
