Materials used in restorative dentistry have different expectations depending on the type of dental restoration. They are exposed to mechanical loads, as well as abrasive and erosive wear during the process of chewing. Furthermore, the oral environment is very aggressive towards the materials used in restorative dentistry, and is also exposed to a wide range of conditions when consuming food, such as variable temperatures and variable pH.

Materials | Special Issue : Properties of Dental ...

Some of the dental materials recently introduced - low-shrinkage resin composites and Y-TZP-based fixed prostheses - have changed some of the classical concepts of clinical dentistry. For the first time in 40 years, dentists are using a non-BisGMA resin composite. Shrinkage stresses are reduced with the new silorane-based resin composites.

Materials | Special Issue : Dental Materials

Dental practitioners, who will be confronted with these materials and techniques in the daily clinical practice, require a certain level of knowledge if they are to benefit from these new materials. This Special Issue calls for high-quality research articles, clinical studies, technical advances, and case reports focused on advanced dental materials including experimental research, clinical study, digital technologies and systems, 3D printing, and bone regeneration available for dentistry.
