Robotic Process Automation (RPA) has grown from a relatively obscure technology that few recognised to significantly disrupting the workforce in just a few short years. Analysts predict the growth will continue exponentially But what is the truth? How do you distinguish between the hype and the myths that now surround this topic? Whether it's Bill Gates suggesting RPA should be taxed, or predictions of massive job losses, there is a lot of confusion about what RPA really is and what impact it will have. Whatever industry sector you find yourself in, no matter how large or small, you will find that RPA will become the backbone of your future workforce if you are to continue to meet the changing customer demands. There is a need to act quickly and transform your business now or risk being disrupted by those who have already set out on their automation journey. But then we find that between 30%-50% of automation pilots fail! Statements made by vendors how easy it is to implement RPA are somewhat overstated. However, there are some basic lessons learned that can help you find the right path for your organisation. In this book, I will explain the different types of Robotic Process Automation and how to align your business needs to the solutions available and then start and scale your automation journey. This is not a sheep-dip approach but a carefully considered approach that helps you to align your specific business needs to the right solution and the right business model. Implementing RPA is not easy, but neither should it be too difficult if you follow a well-considered approach.

The massive increase in digital information in the last decade has created new requirements for institutional and technological structures and workforce skills. Preparing the Workforce for Digital Curation focuses on education and training needs to meet the demands for access to and meaningful use of digital information, now and in the future. This study identifies the various practices and spectrum of skill sets that comprise digital curation, looking in particular at human versus automated tasks. Additionally, the report examines the possible career path demands and options for professionals working in digital curation activities, and analyzes the economic benefits and societal importance of digital curation for competitiveness, innovation, and scientific advancement. Preparing the Workforce for Digital Curation considers the evolving roles and models of digital curation functions in research organizations, and their effects on employment opportunities and requirements. The recommendations of this report will help to advance digital curation and meet the demand for a trained workforce.

With contributions from over 20 leading scholars from across the globe, this new book brings together a number of papers that have been presented at the annual International Labour Process Conference, at which the conference theme 'Working Revolutions: Revolutionising Work' provided the inspiration for many of the chapters included in this volume. Grounded in Labour Process Theory, the text examines how digital technologies impact on work and organisations and provides a rigorous account of the technological, organizational and work related changes in both the new digital industries and in the traditional service and manufacturing sectors. The book covers many of the most significant contemporary issues and subjects in the field, including the representation of women in IT, workplace cyberbullying, virtualisation and the video games industry. This book is essential reading for upper-level undergraduate and postgraduate students studying modules related to technology and work, as well as modules in work sociology on sociology degree programmes.

This collection of different views on how digitalization is influencing various industrial sectors addresses essential topics like big data and analytics, fintech and insurtech, cloud and mobility technologies, disruption and entrepreneurship. The technological advances of the 21st century have been massively impacted by the digital upheaval: there is no future without digitalization. The sale of products and services has left the classical point of sale and now takes place on a variety of channels. Whether in the automotive industry, travel and traffic, in cities, or the financial industry – newly designed ecosystems are being created everywhere, data is being generated and analyzed in real time, and companies are competing for mobile access channels to customers in order to gain knowledge about their individual contexts and preferences. In turn, customers can now publicly share their opinions, experiences and knowledge as User Generated Content, allowing them to impact the market and empowering them to build or destroy trust.

The Digital Renaissance of Work: Delivering Digital Workplaces Fit for the Future takes the reader on a journey into the emerging technology-led revival of work.
