Written by one of the most
successful aerospace authors,
this new book develops
aircraft performance
techniques from first
principles and applies them

to real airplanes. It also address a philosophy of, and techniques for aircraft design. By developing and discussing these two subjects in a single text, the author captures a degree of synergism not found in

other texts. The book is written in a conversational style, a trademark of all of John Anderson's texts, to enhance the readers' understanding.

"The study of aerodynamics

is a challenging and rewarding discipline within aeronautics since the ability of an airplane to perform (how high, how fast, and how far an airplane will fly, such as the F-15E shown in Fig. 1.1) is determined

largely by the aerodynamics of the vehicle. However, determining the aerodynamics of a vehicle (finding the lift and drag) is one of the most difficult things you will ever do in engineering, requiring complex theories,

and simulations using modern
highspeed computers. Doing
any of these things is a
challenge, but a challenge
