In general, the main task of the electric drive is the motion control of mechanisms. An electric drive is an automatic control system with a number of feedbacks where different automatic control principles, such as error driven feedback control, model based control, logical binary control, or fuzzy logic control methods, are used.

## ~~4. ELECTRIC DRIVES~~

In very simple words, the systems which control the motion of the electrical machines, are known as electrical drives. A typical drive system is assembled with a electric motor (may be several) and a sophisticated control system that controls the rotation of the motor shaft. Now days, this control can be done easily with the help of software.
