Tolerancing and the ASME Y14.5 Standard, established the Geometric Dimensioning and Tolerancing Professional (GDTP) Certification Program. This program provides the means to recognize proficiency in the understanding and application of the geometric dimensioning and tolerancing principles expressed in ASME Y14.5M-1994 and ASME Y14.5-2009. Those principles form an essential element of the language of engineering.

Geometrics is the science of specifying and tolerancing the shapes and locations of features on objects. Once the shape of a part is defined with an orthographic drawings, the size information is added also in the form of dimensions.

Dimensioning a drawing also identifies the tolerance (or accuracy) required for each dimension.

## Dimensioning and Tolerancing - School of Engineering

Geometric tolerancing reading helps to understand to specify and control the form, location and orientation of the features of components and manufactured parts. Geometric Dimensioning and Tolerancing is an efficient method for describing the tolerancing mandated by the designer of the part. The Datum axis or Datum planes are to be used for locating other features.

## Geometric Dimensioning and Tolerancing- Applications 1st Edition

Geometric Dimensioning and Tolerancing is a system for defining and communicating engineering tolerances. It uses a symbolic language on engineering drawings and computer-generated three-dimensional solid models that explicitly describe nominal geometry and its allowable variation. It tells the manufacturing staff and machines what degree of accuracy and precision is needed on each controlled feature of the part. GD&T is used to define the nominal geometry of parts and assemblies, to define the
