During the last few decades, sleep medicine and science, and many of their diverse aspects, have emerged as areas of intense medical and scientific interest. Of these, sleep and neuroimmunology, which cut across many behavioral states, are highly interlinked, inherently fascinating and touching upon many facets of human health and well-being. Elucidating the roles of immune substances and cells in central nervous system functions, especially their involvement in the regulation of sleep and wakefulness, may help unravel pathophysiological mechanisms of sleep disorders and improve their management.
