Pain. Some people with heart failure can experience pain or discomfort towards the end of their life. They should be assessed using a pain scale. Pain-relieving medicines can be used to relieve pain and discomfort; this can include opioid (eg morphine) and non-opioid medicines (paracetamol).

Caring for someone with heart failure at the end of life

Tricyclic antidepressants are best avoided in heart failure. Pain is very common, especially in the terminal stages: One common cause is stretching of the capsule of the liver. It should be managed in the usual way for palliative care except that non-steroidal anti-inflammatory drugs should be avoided.

Palliative Care of Heart Failure. Heart Failure Info | Patient

Due to the trajectory of the condition, patients with advanced heart failure often have suboptimal palliative care management when compared with cancer patients. 7 If clinicians acknowledge when a patient is deteriorating, it can provide an opportunity to discuss what benefit ongoing treatment is able to provide, and address their concerns about the future.

New heart failure guidance offers crucial palliative ...

Palliative Care and Hospice for People with Heart Failure. Traditional medical care for heart failure (HF) is aimed at improving heart function and/or delaying progression with medications, and managing symptoms. People with HF are at risk for sudden clinical decline or cardiac death.

Palliative and Hospice Care for Heart Failure

Palliative care is provided by a team of palliative care doctors, nurses and social workers. They work together with your cardiologist (heart specialist) to give you an extra layer of support. The team has a wide variety of approaches to treating congestive heart failure symptoms. These may include medicines, but not always. Palliative care teams are expertly trained to manage symptoms, side effects and stresses.
