Lesson 8: Parallel and  
Perpendicular Lines

Classwork Exercise 1 1. a.

Write an equation of the  
line that passes through the  
origin that intersects the  
line  $2 + 5 = 7$  to form a right  
angle. b. Determine whether  
the lines given by the  
equations  $2 + 3 = 6$  and  $= 3 2$   
 $+ 4$  are perpendicular.  
Support your answer.

# Download File PDF Lesson 8 Parallel And

students understand the relationship between the slopes of parallel and perpendicular lines and in particular, to help identify students who find it difficult to:

- Find, from their equations, lines that are parallel and perpendicular.
- Identify and use intercepts.

# Download File PDF Lesson 8 Parallel And

that is parallel or perpendicular to a given line, as part of the Algebra material that many state exams cover.

## *Lesson 19: Parallel and Perpendicular Lines*

Since slope is a measure of the angle of a line from the horizontal, and since parallel lines must have the same angle, then parallel lines have the same slope – and lines with the same slope are parallel. Perpendicular lines are a bit more complicated.
