Laura Stamm's Power Skating presents the techniques and drills that Laura Stamm has used to train some of the top professional teams and players. With more than 300 detailed skill-demonstration photographs and illustrations, this is the perfect resource for all skill levels. The selected skills reflect the sport's 2004 rule changes which resulted in a much faster, more open game on the ice. Original.

Following the highly successful "Digital Photography Manual, the complementary "Photography and Your Digital World concentrates on image-editing and image manipulation, to provide a complete resource aimed at all levels of expertise. Highly practical with a results-oriented approach, the book looks at image creation from both a photographic and artistic viewpoint. The creation of images is examined holistically -- all the components of the process, including the original image, the software tools and the user's skill and creativity are examined and seen to contribute to the end result. Techniques and effects are given in the context of producing exemplary results, and creative solutions are presented for typical imaging problems. Taking a generic approach to software packages wherever possible, the low emphasis on individual software packages will prevent this title from dating quickly, allowing it to retain credibility as new software is developed.

Learn all about Codecs--how they work, as well as design and implementation with this comprehensive, easy-to-use guide to compression. After reading this book, you will be able to prepare and distribute professional audio and video on any platform including streamed to the web, broadcast on-air, stored in PVRs, Burned onto CD-ROMs or DVDs, delivered by broadband, or viewed in Kiosk applications, PDA devices, and mobile phones.

This book focuses on various aspects of research on ageing, including in relation to assistive technology; dignity of aging; how technology can support a greater understanding of the experience of physically aging and cognitive changes; mobility issues associated with the elderly; and emerging technologies. The 80+ age group represents an expanding market, with an estimated worth of £ 21.4 billion a year. Everyone is affected by this shift in demographics -- we are getting older and may become carers -- and we need to prepare ourselves and adjust our surroundings for longer life. Products, services and environments have been changing in response to the changing population. Presenting international design research to demonstrate the thinking and ideas shaping design, this book is a valuable resource for designers; product developers; employers; gerontologists; and medical, health and service providers; as well as everyone interested in aging.

From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from The Economist examines how far technology has come and where it is heading. Part one looks at topics such as the “ greying ” (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the “ digital Swiss Army knife ” ; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.
