Students do not experience math in a vacuum. The curriculum, the students' social and emotional well-being, and the teacher's expertise as a facilitator must all be attended to, and each interacts with the others. -Geoff Krall Math instruction in high school is often something of a grab bag, with schools jumping from curriculum to curriculum, lacking a guiding vision or continuity between years. No wonder so many students conclude, "I'm not a math person." Geoff Krall thinks that's a problem. And he's devoted his career to fixing it. Necessary Conditions posits for the first time a coherent approach to secondary math pedagogy. Krall identifies three essential elements that will open the door to math for all your students: academic safety, quality tasks, and effective facilitation. Krall takes readers into real middle- and high-school classrooms to see how teachers cultivate these three "necessary conditions." With extensive examples, practical techniques and resources, and insightful analysis, this guide equips teachers to do the following: Design classroom experiences that increase engagement and build all students' identities as mathematicians. Create dynamic, high-quality lessons that include meaningful, efficient assessment. Facilitate routines and discussions that increase all students' access to conceptual mathematics. The biggest drivers of students' math experiences are their teachers. With Krall's guidance, you can help every student come to recognize that they are indeed a "math person."

This user-friendly professional resource was written by Laney Sammons. This resource provides instruction on how school leaders can adopt the Guided Math framework into their schools and classrooms. Highlights include tips for creating a strategic plan for improving students' achievement, sample assessments, and tools for planning and implementation.

Using standardized testing formats, math skills are kept sharp with focused practice in computation, word problems, graphing, measurement and numbers. Includes scope and sequence charts and answer keys.

Your desk reference for success with exceptional students Today 's teachers, especially the many who work with students with special needs, are pressed to know a little something about everything. Expertise is needed in different content and pedagogical areas, but knowledge of different types of disabilities is required as well. Wendy Murawski and Kathy Lynn Scott have assembled another reader-friendly What Really Works resource full of experiences and evidence-based practices to empower any educator. Each chapter is presented in an easy-access and practical format suited for busy professionals. The editors and authors examine how special educational needs affect Content areas like reading and math Specialization areas like autism and learning disabilities Pedagogical areas like culturally responsive practices and accommodations Other critical areas like legal issues, behavior challenges, and home-school collaboration As education trends promote the inclusion of students with exceptionalities, this book is the perfect resource for teachers and administrators who need to know what works...and what doesn ' t.

Textbooks are symbols of centuries-old education. They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity. It's time to ditch those textbooks--and those textbook assumptions about learning In Ditch That Textbook, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. Ditch That Textbook is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.
