Community nurses usually visit you at home, and family and friends may be closely involved in caring for you too. What is palliative care? End of life care includes palliative care. If you have an illness that cannot be cured, palliative care makes you as comfortable as possible, by managing your pain and other distressing symptoms. It also involves psychological, social and spiritual support for you and your family or carers.

**What end of life care involves—NHS**

Palliative care is the type of care given to people who are living with a terminal illness. It aims to manage pain and other symptoms rather than providing a cure. It ensures that a person is as comfortable as possible. Palliative care forms a part of end of life care.

**Palliative Care | Caring Homes**

Palliative care is about helping people living with a terminal illness and everyone affected by their diagnosis to achieve the best quality of life. As well as providing care and support to patients, palliative care nurses help entire families through one of the toughest times any of us will face. It's a challenging but highly rewarding job.

**How to become a palliative care nurse**

Providing palliative care involves serious challenges for nurses, such as end-of-life decisions, contact with people's suffering and dying, and increased risk of burnout. However, studies have revealed that the burnout level of health professionals working in palliative care is lower than that of health professionals working in other settings.

**The nurse's role in palliative care: A qualitative meta—**

A nurse's role in palliative care is different from other specialties. Although all nurses are skilled in caring for patients, palliative nursing means being available to the patients 24 hours a day to manage their pain and discomforts and to provide support to the families. A nurse doesn't just have a single role in palliative care.

**The Crucial Role of Nurses in Palliative Care—NurseBull**

Palliative care aims to improve the quality of life of people who are experiencing a life-limiting illness and also supports their families. It helps to prevent and relieve suffering through the early identification, assessment and treatment of pain and other physical, emotional and spiritual problems. This website provides core information that is targeted at family members or friends who are providing support to a person who needs palliative care.

**Caring for Carers**

Palliative care is treatment, care and support for people with a life-limiting illness, and their family and friends. It's sometimes called 'supportive care'. The aim of palliative care is to help you to have a good quality of life – this includes being as well and active as possible in the time you have left.

**What are palliative care and end of life care?**

The nutritional objective in palliative care should be about quality of life including comfort, symptom relief and enjoyment of food. 3 Whilst it is important to prevent or treat avoidable malnutrition, it is also important that nutritional support measures are not so invasive or unacceptable that they impair quality of life.

**Nutritional management in palliative care—Nursing in—**

Palliative care is considered an essential component of any healthcare system. In spite of that, the access to this type of care is still inadequate in many countries. It is estimated that palliative care needs will continue to grow, as the rapidly aging of the population leads to increasingly complex health conditions.1 Palliative care is an

**Nursing theories in palliative care investigation: a review**

Palliative care incorporates the whole spectrum of care — medical, nursing, psychological, social, cultural and spiritual. A holistic approach, incorporating these wider aspects of care, is good medical practice and in palliative care it is essential.

**6 Principles of palliative care—International—**

Nursing is a responsibility of a public health, an application of concern and a legitimate perception. Palliative Care is an end-of-life care where the serious illness affects the more than just a patient's body. It treats and improves the quality of lives of the person's family members along with a patient.

**Nursing Journal | Nursing and Palliative Care | Online—**

Palliative Care Nursing Caring for someone with a life limiting illness can be found in almost all areas of health care. Nurses who work across the health system can find themselves in clinical situations where palliative care knowledge is needed, even if they are not 'specialist' nurses.

**Palliative Care Nursing**

The aim of the study was to describe nurses' experiences in caring for gravely ill and dying patients outside special palliative care settings. Tape-recorded qualitative interviews were conducted with a total of nine nurses in primary home care, community care and hospitals.

**Caring for dying patients outside special palliative care—**

Palliative care helps people live their life as fully and as comfortably as possible when they have a life-limiting illness. Caring for someone with a life-limiting illness can be an emotional experience. It can also be rich and rewarding.
