Guide for authors - Partial Differential Equations in ...

In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 -$

Partial differential equation - Wikipedia

Partial differential equation, in mathematics, equation relating a function of several variables to its partial derivatives. A partial derivative of a function of several variables expresses how fast the function changes when one of its variables is changed, the others being held constant (compare ordinary differential equation).

George Avalos is interested in the mathematical control and numerical analysis of those coupled partial differential equations (PDE's) which model the control design of interactive structures by means of smart material technology. By coupled PDE's, we mean those which comprise a coupling of two or more disparate dynamics; e.g., a heat equation coupled to a wave equation.

The equations may thus be divided through by τ , and the time rescaled so that the differential operator on the left-hand side becomes simply $d/d\xi$, where $\xi = \tau/\tau_0$, i.e. $\tau = \tau_0 \xi$. The differential equations are now all linear, and the third equation, of the form $dR/d\xi = \text{const.}$, shows that ξ and R (and ξ above) are ...
