According to the requirement for operating resources, the TwinCAT software devices can be distributed: TwinCAT PLC programs can run on the PCs or on Beckhoff Bus Terminal Controllers. A "message router" manages and distributes all the messages, both in the system and via TCP/IP connections.

The TwinCAT PLC library COMlibV2 supplies function blocks and data structures for serial data communication. The library supports the serial Beckhoff KL6xxx bus terminals, EL60xx EtherCAT terminals, the standard PC COMx interfaces and virtual COM ports. The library offers blocks for the following functions: Sending and receiving byte by byte

Introduction The Tc2\_LON library is an extensive TwinCAT PLC library for data exchange with LON devices. The communication with these devices is realized via SNVTs (Standard Network Variable Types). These SNVTs are defined in the LONMark (see also LONMARK and LONMARK Network Variables ). For each SNVT there
