Plausible Values - OECD iLibrary

Plausible values are
values from the error
distribution of the
estimate. Winsteps

Acces PDF

What Are

Plausible values are reports each person's estimate (measure) and its standard error. Plausible values are values selected at random from a normal distribution with its mean at the estimated measure and with standard deviation equal to the standard error.

Plausible values -

analyses

Plausible values are imputed values for latent variables. All latent variables can be thought of as observed variables that have missing data for all observations. Using Mplus imputation utilities based on the MCMC Bayesian estimation, see

Acces PDF

What Are

Plausible and
Muthen (2010), we
can produce imputed
values for each latent
variable.
